

Student Name: Ferhat Altunel

Part 1:

1. Which of the following are the three most common methods for organizing websites?

Answer: b. hierarchical, linear, and random

2. Which of the following are the four principles of the Web Content Accessibility Guidelines?

Answer: b. perceivable, operable, understandable, and robust

3. Which of the following are influenced by the intended or target audience of a site?

Answer: d. all of the above

4. Which of the following recommended design practices apply to a website that uses images for its main site navigation? **Answer:** c. Both a and b.
5. Which of the following is a color scheme that consists of two colors that are opposite each other on the color wheel?

Answer: b. complementary

Part 2:

I chose to compare **CNN** (<http://www.cnn.com>) and **MSNBC** (<http://www.msnbc.com>) because they are both famous news websites. Here is my review based on design principles:

- **Repetition:** Both sites use the same fonts and colors (like red and white) on every page so the user doesn't get confused.
- **Contrast:** They use black text on a clean white background. This makes it very easy to read the news without straining the eyes.
- **Proximity:** I noticed that related stories and photos are placed close to each other in groups. This helps me understand which headline belongs to which picture.
- **Alignment:** Everything is organized in a straight grid. The titles and images are aligned perfectly, which makes the pages look professional and tidy.
